

## Why Scenario Replay Is The Industry's Best Replay Tool

### Scenario Replay: Setting a New Standard

- Simple yet powerful search capabilities save time
- Filters and advanced search criteria quickly and precisely identify desired transmissions
- Unlimited system-wide search from a single workstation
- Replay channel count only limited by recorder capacity
- Easy-to-use, flexible user interface improves comprehension
- Intuitive yet extensive controls minimize training time
- Various graphical views simplify analysis
- Sort and view by different criteria to suit user needs
- Flexible save options reduce workload
- Save complete scenario as single .wav for replay on standard PC for fast evidence delivery
- Save as Scenario file for later replay to optimize user time
- Save with AGC and/or Spoken Time to save time and enhance usability

### Scenario Replay - Industry's Best Multi-channel Replay Application

- Market's most complete search and replay of radio and telephone communications
- Successfully deployed with world's largest police departments
- Developed with leading radio systems manufacturers to ensure complete search and replay of trunked radio and all telephony calls
- Faster search and delivery saves time
- Intuitive and easy-to-use controls simplify user's task
- Available in English, French, German and Spanish versions

The screenshot shows the Scenario Replay application window. It includes a menu bar (File, View, Play, Help), a toolbar with playback controls, and a search section with filters for Data Source, Agent Name, Agent ID, Phone Number, Direction, and Comment. Below the search section is a table of search results with columns for ALIAddressLine1, ALICity, ALIName, ALIState, ALIZip, and CallG. A 'Properties of Current Transmission' window is open on the right, showing details for a selected transmission. At the bottom, a 'Graphical View' shows a timeline of transmissions with a 'Time Bar' and a 'Current Transmission' highlighted.
