

FUSION SPEECH® powered by Nuance's SpeechMagic™

3-Stage Approach to Speech Recognition Deployment

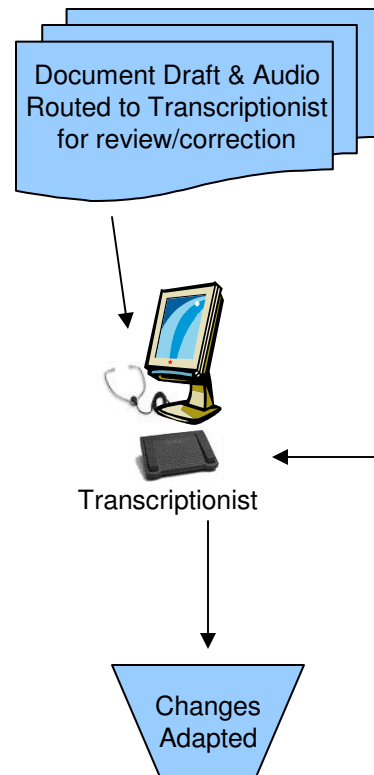

1. Evaluation Mode:

Captured dictation is sent to both transcriptionist and speech recognition server. Adaptive Learning continues on the dictator until accuracy of 70-80% is achieved.

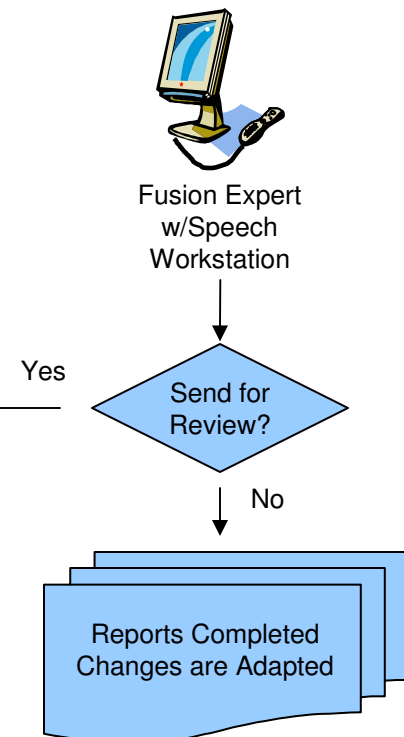

2. Background Editing:

Disabling Evaluation Mode for a dictator will automatically start routing draft reports to the transcriptionist for review and correction.

2. Fusion Expert® powered by Nuance's SpeechMagic:

Once maximum recognition is achieved with background editing, allow dictators to create and complete reports interactively with the option of sending to transcription.

Physician Product Options

- Audio (requires Fusion Voice® Server)
 - **Telephone** – Simple, traditional.
 - **Fusion Dictate®** – integrated voice capture PC Client with extended features such as Audio Normals, finish later (open), access to prior studies, etc.
- Audio + Text (requires Fusion Text® & Fusion Speech® Server)
 - **Fusion Expert®** – Audio capture + option for document creation, sign-off and distribution via Text Normal or Keyboard Input.
 - **Fusion Expert® w/Speech** – Adds integrated Speech Recognition – physician can opt to review immediately or route to transcription.
