VISIONHUB SOLUTION OVERVIEW

THE NEXT GENERATION VIDEO
MANAGEMENT SOLUTION

VISIONHUB

VMS POWER. EXTENDED.

AN INFLECTION POINT IN THE VMS MARKET

The VMS market is changing, customers expect to get more out of their investment in video management solutions. Threats are becoming more complex as well, security professionals are required to understand what is going on and respond fast, all that while handling an overload of information.

A holistic approach is needed, one that leverages video to address a wide set of security management challenges, a solution that merges advanced technology and operational best practices. Such a solution enables security personnel to achieve their most important goals of reducing risk and maintaining business continuity.

THE VMS OF THE NEW ERA

VisionHub addresses the needs of security conscious organizations, leveraging video as the main sensor in the control room while adding valuable data from other security systems such as access control, fire detection, intrusion detection and alarm panels. VisionHub increases situational awareness through GIS enabled visualization and provides procedure enforcement, automation and security operations optimization using dynamic workflows.

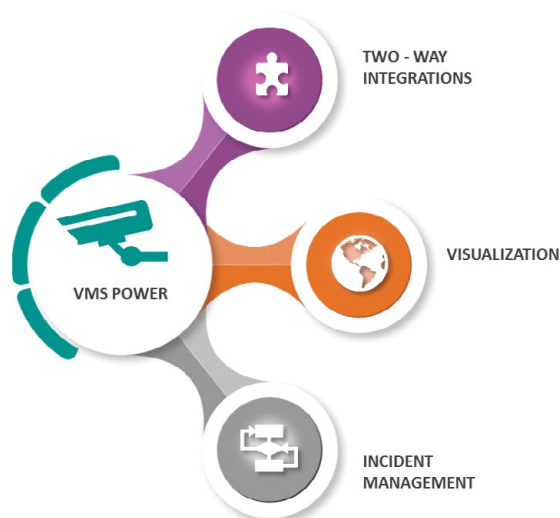

Figure 1. VisionHub – Much More Than Video Management

MAKING YOUR VIDEO HANDLING EXTRA POWERFUL

STRONG. SMART. SCALABLE. SIMPLE.

VisionHub is Qognify's next generation video management solution, extending far beyond the standard video management scope. Relying on Qognify's vast experience and robust video management core, VisionHub provides a video centric security management solution that enhances overall effectiveness and efficiency.

- **STRONG** – VisionHub's powerful redundancy and resiliency make sure that you'll never lose video. Guaranteeing extreme performance using the highest standards of IT security and advanced video recording software.
- **SMART** – VisionHub comes with advanced home-grown and field proven Video Analytics including the patented award-winning Suspect Search. In addition, value-added capabilities can also be provided, with any camera, like AVMD, Camera Tampering and VisualParameters Optimization for guaranteeing optimal video quality.
- **SCALABLE** – fits any size and any architecture. Covering single critical locations such as airports and healthcare facilities as well as multiple independent sites from a centralized management location – ideal for organization's with branches and remote or dispersed locations.
- **SIMPLE** – advanced deployment and configuration tools make it easier to deploy and integrate with VisionHub.

KEY FEATURES

- High end video management
 - Video viewing and control – a rich video experience with advanced features for video management, investigation and export
 - Video management infrastructure - relying on Qognify's vast experience and robust video management core
- Access control management - vendor agnostic integration to access control with a built-in two-way rich management module
- Openness - integrations with key security systems such as intrusion detection, fire detection and alarm panels
- Visualization – GIS enabled mapping to track incidents and sensors
- Incident management - collaboration, automation and workflows
- Easy deployment – enhanced capabilities for faster and easier deployment

VALUE ADDED SERVICES WITH A TECHNOLOGY EDGE

VisionHub is seamlessly integrated with Qognify's industry leading video analytics portfolio and award winning Suspect Search.

Providing the technological advantage security managers need to identify risks and respond to incidents quickly and effectively.

KEY BENEFITS:

- A robust video management core
 - High reliability
 - Full scalability
 - Edge device agnostic (analog/digital/high-definition)
 - Powerful permissions management
 - Based on vast experience with leading enterprises
- A video-centric hub for managing security effectively
 - Situational awareness through integrations and visualization
 - Efficiency through automation, workflows and collaboration
 - Improved investigation capabilities
- Empowering the operator
 - Flexible and personalized operation
 - Web technology with new and advanced features
- Improved deployment
 - Effortless deployment of operator client
 - Easy to install and configure
- In-house analytics
 - Advanced Video Analytics portfolio
 - Integrations with Suspect Search
- Future proof

ABOUT

Qognify helps organizations mitigate risk, maintain business continuity, and optimize operations. The Qognify portfolio includes video management, video and data analytics, and PSIM/Situation Management solutions that are deployed in financial institutions, transportation agencies, airports, seaports, utility companies, city centers, and to secure many of the world's highest-profile public events.
